MUFFIN FANS

Whisper fans made by Rotron. These are 110vAC type fans. They are about 4.7" square and 1.5" deep (119.6 mm x 38.1 mm). Air movement is between 52 to 75 cfm making them extremely quiet for efficient cooling where low acoustical disturbance is a must. Brand new. Impedance protected. Similar catalogue price \$39.95

GREEN MONITOR

These are just beautiful 12" GREEN CRT monitors made by Eliston Electronics of U.S.A. They differ from the other monitors we have and have had in that these will accept composite video input. They have strapable 75Ω termination. 1000 line resolution, 18 MHz. bandwidth, and require only 16vAC min. at 1.5 A for power supply. These come complete with theory of operation sheets and a schematic. The CRT is mounted almost straight upright and has four mounting flanges so one may easily adapt it to almost any application. Overall dimentions are approx. 10" H x 11" W x 11" D. Weight is about 5½Kg. Due to the fragile nature of these, they must go by other means than mail. We normally ship via CANPAR which is a freight courier. Freight charges would be about \$7.00 for each monitor. Compatible with most standard micro computers.

JOYSTICKS

These are joysticks designed for use with video games and computers. They are the switch contact type. As shown, they come with a standard female DB-9 connector. The connector may be easily taken apart for modifying the pinout.

64K RAM - 41254

This is a 65,535-word by 4-bit dynamic MOS RAM. It is designed to operate from a single +5v power supply making it ideal for microprocessor applications. Although it is a rather new device there are some micro computers already designed to use this device. The Radio Shack Colour Computer (Korean Board) uses this for it's 64K upgrade. These are 150 ns access time. Data sheets free and available on request.

256K RAM - 41256

The 41256 is a 262,144-word by one-bit dynamic N-channel MOS RAM designed to operate from a single +5v power supply. The 41256 offers a direct upgrade from the 64K 4164 RAM achieving a four-fold increase in bit density at the board level. Features low power dissipation, TTL compatible inputs and low input capacitance. 16 pin DIL case. These are 150 ns access time. Made by Hitachi. Prime first grade devices, as always. Now is the time to upgrade that memory board at fantastic savings. Data sheets free and available on request.
